PRESSURE RELIEF VALVE VVP

- NG 6, 10
- Up to 400 bar [3,045 PSI]
- Up to 60 L/min [31.7 GPM]
- For fitting into a block.
- For independent mounting.
- Two pressure setting elements (set screw, rotary knob).

VVP-6, VVP-10

Operation

These valves consist of a housing (1), a hardened seat (2), a poppet (3), with a damping spool (4), a spring (5), and a pressure setting element (6). The P-line of this pressure relief valve is connected with the hydraulic system. The pressure of the hydraulic fluid acts on the front side of the pilot poppet (3), and the force of the spring (5) set by the pressure setting element (6) is applied to the poppet from the opposite side. When the system pressure exceeds the valve of the spring set by the pressure setting element (6) the pilot poppet moves off the seat (2), and frees the flow of the hydraulic fluid in the direction from P towards T.

The damping spool (4) prevents vibrations of the pilot poppet when opening or closing the flow way of the hydraulic flow. Loosening of the pressure setting element is prevented by a counternut (8).

Hydraulic symbol

Direct operated pressure relief valves type VVP are used to maintain and limit the pressure in a hydraulic system.

PRESSURE RELIEF VALVE VVB2-10

- NG 6
- Up to 210 bar [3,045 PSI]
- Up to 60 L/min [15,8 GPM]
- Direct in-line mounting.
- Threaded connections to ISO 9974 (Metric), ISO 1179 (BSPP/Gas).
- Five different pressure setting elements.

Special requirements to be briefly specified

PRESSURE RELIEF VALVE RT

- NG 4, 6, 10
- Up to 350 bar [3,045 PSI]
- Up to 60 L/min [26.4 GPM]
- For independent fitting into a block.
- Two pressure setting ranges.

RT-4, RT-6, RT-10

Operation

Pilot operated pressure relief valves type RT are used for maintaining and limiting the pressure in a hydraulic system. These valves consist of a housing of cartridge design (1), main spool insert (2) with a spring (3), pilot poppet (4), spring (5) and pressure setting element (6). The P-line of this pressure relief valve is connected with the hydraulic system. The hydraulic medium pressure acts on the front side of the main spool insert. The bores (7,8) permit the introduction of pilot oil into the pressure chamber (9) and the application of pressure to the opposite side of the main spool insert and the front side of the pilot poppet. The pressure balance in the system and pressure chamber holds this pressure relief valve in closed position till the pressure in system exceeds this value the pilot poppet moves off the valve seat, freeing the pilot oil discharge through the bore (10). A pressure drop in the pressure chamber rises the main spool insert, thus clearing the hydraulic medium flow way in the direction from P towards port T.

Loosening of the pressure setting element (6) is prevented by a counternut (11).

Model code

PRESSURE RELIEF VALVE VP-RT

- NG 6, 10
- Up to 350 Bar [3,045 PSI]
- Up to 100 l/min [26.4 GPM]
- Connecting dimensions to ISO 4401.
- For vertical stacking - sandwich plate design.
- Two pressure setting ranges.

VP-RT-10, VP-RT-6

Operation

These valves consist of a stack plate (1), pressure relief valve housing (2), main spool insert (3) with a spring (4), pilot poppet (5), spring (6) and pressure setting element (7). The P-line of this pressure relief valve is connected with the hydraulic system. The hydraulic medium pressure acts on the front side of the main spool insert (3). The bores (8,9) permit the introduction of pilot oil into the pressure chamber (10) and the application of pressure to the opposite side of the main spool insert. This pressure relief valve remains in closed position till the system pressure exceeds the valve set at the spring (6). A pressure rise in the system above the value set by the pressure setting element (7), provokes the movement of the pilot poppet (5) of the seat, freeing the pilot oil discharge through the bores (9) and (11). A pressure drop in the pressure chamber (10) rises the main spool insert (3), thus clearing the hydraulic medium flow in the direction from port P towards port T.

Loosening of the pressure setting element is prevented by a counter nut (12).

Pilot operated pressure relief valves type VP-RT of sandwich plate design, for vertical stacking, are used for maintaining and limiting the maximum pressure in a hydraulic system.
